

Our Mission

Using public input, develop a plan that addresses the transportation needs of the 21st century along the I-84 Orchard to Gowen corridor.

I-84 Project Corridor

Key Activities:

Several key activities that will be completed as part of this project include a concept report, preliminary design, a construction-staging plan, and a complete environmental

- The **concept report** will identify improvements that need to be made through the year 2035. It will identify options for the interchanges at Orchard, Vista, Broadway and Gowen and will determine the number of lanes needed on I-84 between the Orchard and Gowen Road interchanges.
- **Preliminary design** activities include surveying, traffic projections, right-of-way determination, interchange layout, highway engineering and cost estimates.
- The **construction-staging plan** will determine the order of construction for each portion of the project. The plan will identify the most effective way to construct the project while keeping traffic flowing along the corridor.
- A complete **environmental analysis** will be done to follow the guidelines set forth in the National Environmental Policy Act (NEPA). The environmental document will detail issues that may arise as a result of the project. Some of the environmental issues that will be addressed in the environmental document are noise impacts, air quality, effects on surrounding neighborhoods and businesses, and impacts to wildlife and plant habitat. An approved environmental document is necessary
